Application/Control Number: 09/741,046

Art Unit: 1733

1) Figure 4 should be designated by a legend such as --Prior Art— because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

- 2) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3) Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Europe '464 (EP 943464) in view of Tsuda (US 4,962,801).

Europe '464 substantially discloses the claimed tire except for the inclination angles of the first to fourth grooves being different. See figure 3. However, it would have been obvious to incline the first to fourth auxiliary slant grooves in the outside of the asymmetrical tread pattern of Europe '464 at different angles θ 1, θ 2, θ 3, θ 4 as claimed since Tsuda, which like Europe '464 discloses an asymmetric tread pattern, suggests using different inclination angles for the auxiliary slant grooves so as to improve cornering stability and noise reduction on off road or snow conditions. The limitation of angle θ 0 being 40-60 degrees would have been obvious in view of Europe '464's teaching to incline the main slant grooves at angle α of 60-80 degrees and Tsuda's teaching to incline main slant grooves at an angle θ a of 30-75 degrees when using the differently inclined auxiliary slant grooves in consideration of the problem of embedding the groove with mud in use off road. The limitation of angle θ 5 being 70-100

Application/Control Number: 09/741,046

Art Unit: 1733

degrees would have been obvious in view of Europe '464's teaching to incline at angle β of 80-110 degrees.

Remarks

- 4) The remaining references are cited of interest.
- 5) No claim is allowed.
- Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven D. Maki whose telephone number is 703-308-2068. The examiner can normally be reached on Mon. Fri. 7:30 AM 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Ball can be reached on (703) 308-2058. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-7718 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
